SUMMARY

Graduating from the Talented Engineer Program, majoring in Electronics and Telecommunications at Hanoi University of Science and Technology, I am actively participating in research at FIL (Future Internet Laboratory). My research revolves around distributed artificial intelligence in edge cloud computing environments, focusing on various applications such as security protocols and system optimization strategies.

EDUCATION

Bien Hoa High School for the Gifted **Jul 2017 - Jun 2020**
Specialized students in Physics

Ha Noi University of Science and Technology **Oct 2020 - Sep 2024**
Bachelor's degree in Electronics and Telecommunications.

- **CPA: 3.31/4.0**

TECHNICAL & SOFT SKILLS

Technical Skills:

- Programming language: Python, C/C++, Java, HTML/CSS
- Knowledge:
  - OS - Ubuntu, Docker, Vsphere server.
  - Network(switching, routing layer2, 3; CCNA; BGP) , Sercurity in network (DDOS, DGA)
  - AI: Computer Vision, Transformer Architecture, Attention, AI in edge-cloud computing.

Soft Skills:

- Teamwork skill, diligence in work
- Document reading skills
- Critical thinking skills.
- Problem-solving skills.

ACHIEVEMENTS

- Won first prize in the provincial Physics competition in 2018.
- Participated in the national team of excellent Physics students.
- Achieved the title of 5-Good Student at the school level in the academic years 2021-2022.
- A Travel Grant worth **$2000** to attend the **SIGCOMM 2024 conference, ranked A,** held in Sydney, Australia.
- Published the paper titled "**On the Impact of Heterogeneity on Federated Learning at the Edge with DGA Malware Detection**" at the AINTEC 2024 conference. *DOI: 10.1145/3674213.367421*

WORK EXPERIENCE

Future Internet Lab **Mar 2022 - Now**
Position: AI research team leader

- Researching distributed AI models in Edge Cloud Computing environments.
- Investigating and applying AI in DGA (Domain Generation Algorithm) detection.
- Utilizing Reinforcement Learning in optimizing 5G antenna systems.
- Developing optimized algorithms for Federated Learning models.
- Applying reinforcement learning in deploying services within Serverless architectures.
- Using AI to recognize actions in videos: Application in sign language - ViViT model.

WORK EXPERIENCE

FPT Software **Jul 2022 - Sep 2022**

Position: Intern C/C++

- Designing applications using Windows Forms and retrieving data from an SQL database
- Exception Handling and Debugging/Tracing Techniques
- Learning Linker Scripts, Macros, Bit Operations, and Unit Testing
- Object-Oriented Programming (OOP)
- Processes, Threads, and Multi-threading in C++

Ha Noi University of Science and Technology **Oct 2020 - Sep 2024**

Position: Student

- Using AI to recognize actions in videos: Application in sign language - ViViT model.
- Designing a projector signal control circuit using an 8-bit microcontroller (esp8266) - NEC protocol
- Designing a file management model between client and server communicating via sockets and secured with SSL/TLS
- Analysis and design of systems: Designing an app supporting online sales - Grocery App
- Designing a hospital management website
